

Local Government Resilience Toolkit

ABAG Resilience Toolkit Advisory Committee

December 12, 2014

earthquake and hazards program

Association of Bay Area Governments

Meeting goals

- Get you up to date on where the project has gone
- Narrow down priorities list
- Decide the best course of action
 - What is the best role for the Advisory Committee, given the change in direction of the project?

WELCOME!

ABAG's Resilience Program is launching a new venture - a quarterly newsletter to keep you updated on our resilience projects, innovative resilience-building work happening at jurisdictions throughout the region, and resilience-related topics in the local news. We hope you find this newsletter a welcome opportunity to learn, share, and help build a resilience community of practice in the Bay Area.

ABAG RESILIENCE PROJECTS

Regional Resilience Plan

Over the next 18 months, ABAG will be helping jurisdictions prepare updates for their Local Hazard Mitigation Plans, due in March of 2016. ABAG will convene a series of workshops throughout 2015 to guide jurisdictions through the update process, provide data and other resources, and provide guidance on how to integrate hazard mitigation planning into other planning documents, such as General Plans and Climate Adaptation Plans. The process will kick off in January, 2015. **Email us for more information.**

Regional Infrastructure Interdependencies Project

Over the past 18 months the resilience team has developed an "Infrastructure Vulnerability and Interdependencies Study" for the Bay Area region. The report highlights the seismic vulnerability of the region's airports, passenger rail, highway, electric, fuel, and water systems. The City and County of San Francisco's Lifeline Council report "Lifelines Interdependency Study" was used as a framework to explore interdependencies between lifeline systems.

The ABAG report was funded by Caltrans and was part of a larger Airport study, including liquefaction analysis at five Bay Area airports and a report on the role of airports in disaster recovery. The resilience team is working now to synthesize the findings for broader use by stakeholders in the region. **See the findings report.**

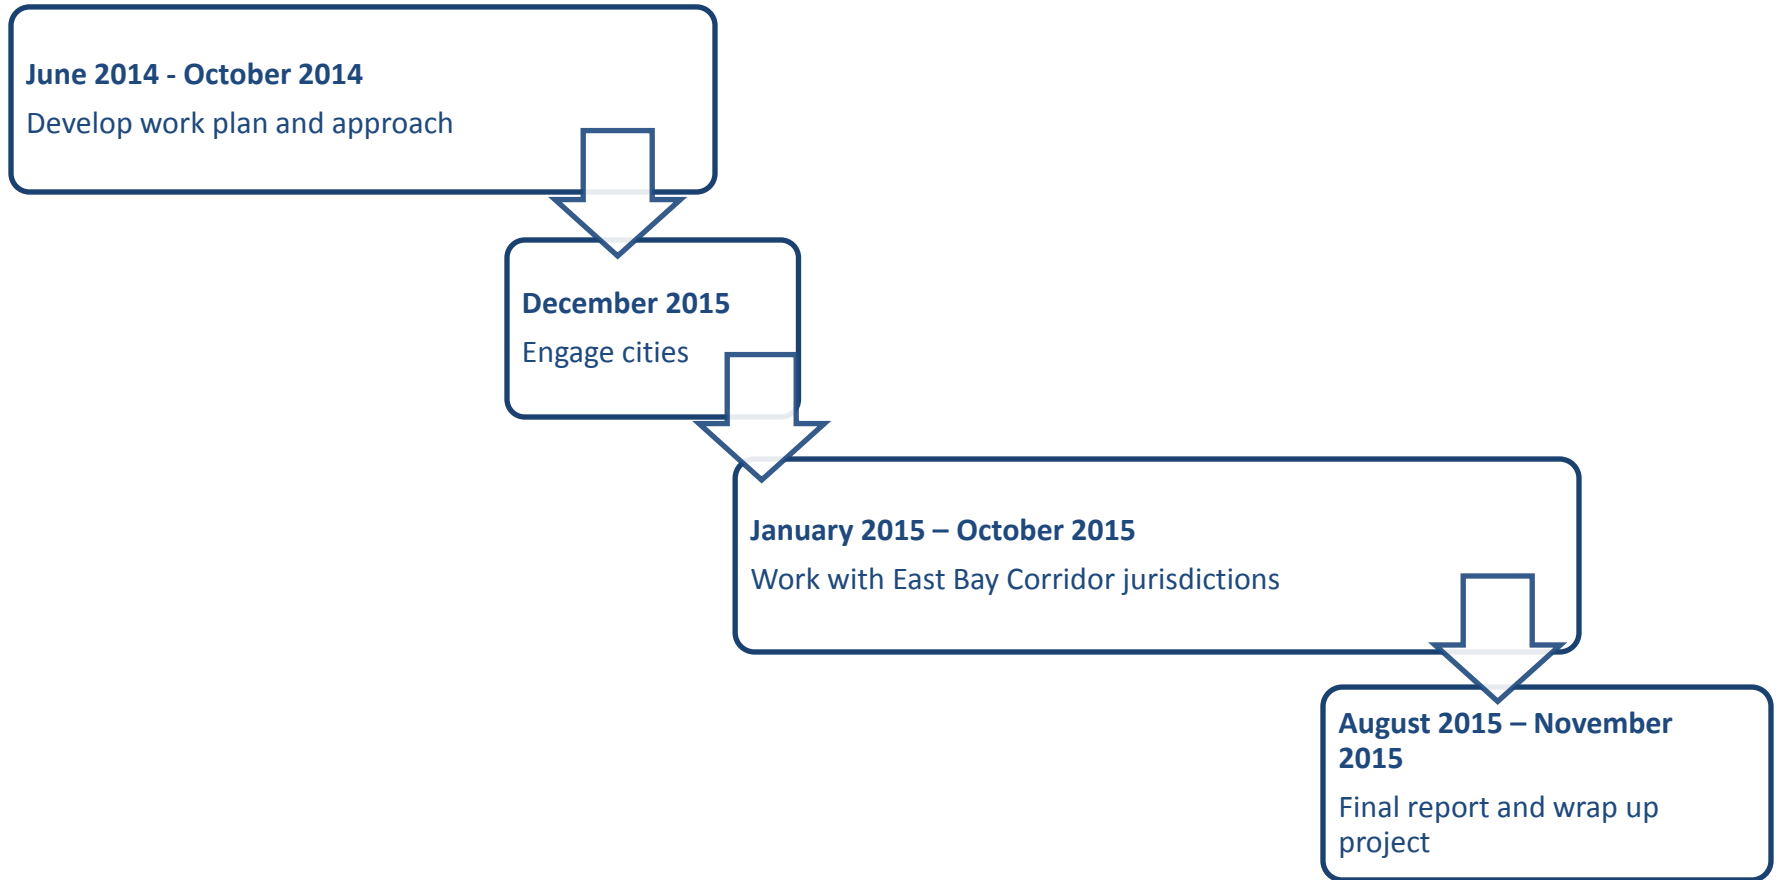

Project Overview

- FEMA Regional Resilience Plan
 - Four main components, including Local Government Implementation Assistance (aligns 80% with Toolkit project)
 - Partner with 10 local government partners in the East Bay Corridors Initiative
 - Staff outreach technical component AND City Manager/elected political outreach
 - Identify 3-5 implementation priorities and development of policy packages and implementation guidance
 - Provide ad-hoc technical assistance for implementation issues
 - Also identify 2-3 additional priorities to research that maybe aren't currently politically feasible

East Bay Corridor Cities

- Oakland
- San Leandro
- Hayward
- Unincorporated Alameda County
- Union City
- San Pablo
- Emeryville
- Berkeley
- Albany
- El Cerrito
- Richmond
- Pinole
- Hercules
- Unincorporated Contra Costa County

Project Timeline

Policy Priority Work Session

- Discussion: How do we coordinate our policy priorities while still honoring the needs and wishes of the jurisdictions

Information Packet Work Session

- Discussion: Does this existing structure serve as a good starting point? Where do we need more depth? What additional information do we need?

Paths for future engagement

- So, do we keep this Advisory Committee intact?
 - Technical review
 - Implementation/political review
- Do you join up with the Regional Resilience Plan Steering Committee?
